First Av. ceiling collapses

Fire officials are assessing integrity of the building.

By MARY LYNN SMITH, LIZ SAWYER and JON BREAM
Star Tribune staff writers

A ceiling collapse at the legendary downtown Minneapolis nightclub First Avenue sent three people to the hospital Wednesday night, and Minneapolis firefighters are evaluating the integrity of the building. Reports of the collapse came

in at about 10 p.m.

Fire crews shut off water to the area, the Minneapolis Fire Department said.

"A large portion of the ceiling fell and took out water pipes with it," said Nate Kranz, First Avenue general manager. "We have no idea why or how it happened. We won't know anything about this until tomorrow. It was a terrible surprise."

Kranz said a couple of people were taken out by ambulance. Hennepin County Medical Cen-

ter spokeswoman Christine Hill said three people were brought into the emergency room and are in satisfactory condition with non-life-threatening injuries.

The ceiling that collapsed was over the balcony DJ booth at the back of the dance floor, he said. A section fell onto the floor about midway through the headlining set by Canadian metal band Theory of a Deadman. The show was stopped, and the thousand or so fans See **COLLAPSE** on A9 ►

Hog-lot fight looms along Lake Superior

Foes rally against plan to build in Bayfield County.

By JOSEPHINE MARCOTTY
josephine.marcotty@startribune.com

BAYFIELD, WIS. - The vivid blue expanse of Lake Superior and the national lakeshore near Madeline Island here in northern Wisconsin have always been largely immune to environmental threats from

factory farms — until now.

A proposal to build the first large-scale livestock facility in the Lake Superior watershed has triggered fierce reaction in the tiny towns along its southwest shore, where residents depend on the lake for drinking water and the annual flow of tourism dollars, a third of which comes from Minnesota. County boards have passed

DANCING WITH THE STARS

A dazzling display of lights dancing across the night sky on Wednesday near Canyon, Minn., north of Duluth, offered a preview of the Perseid meteor shower. The annual celestial fireworks display was expected to peak early Thursday morning. According to NASA, this year's viewing, thanks to Jupiter's position and its agitating gravitational effect on comet particles, will drive them closer to the Earth.

Courtroom camera rules are relaxed

By DAVID CHANEN
david.chanen@startribune.com

The Minnesota Supreme Court has decided to at least temporarily relax courtroom camera restrictions for criminal trials, issuing an order Wednesday that media only need to get a judge's approval to broadcast or take pictures in the courtroom.

The two-year pilot project is a small but dramatic change for a state known to have some of the most restrictive courtroom camera laws in the country. It comes after more than 30 years of intense debate by some of the state's best legal minds and after a report and recommendations by an advisory committee and a public hearing last year.

The pilot project will be evaluated in January 2018. The rules will be far different to those now in place for civil cases, which started allowing cameras to cover entire trials in 2013. Only a handful of civil cases have been televised.

No video or audio media coverage will be allowed during the actual trial. Cameras can See **CAMERAS** on A8 ►

Deadly blasts rock Chinese port

CHINAFOTOPRESS • ChinaFotoPress via Getty Images
Fire billowed into the sky after explosions Wednesday in Tianjin, China. The cause of the blasts was not clear.

At least 17 people were killed, hundreds injured.

By CHRISTOPHER BODEEN
Associated Press

TIANJIN, CHINA - Huge explosions at a warehouse for dangerous materials in the northeastern Chinese port of Tianjin killed at least 17 people, injured hundreds and sent massive fireballs into the night sky, officials and witnesses said Thursday.

China's state broadcaster, CCTV, said that at least 17 people were killed and that 32 others were in critical condition in hospitals after Wednesday's disaster. Nine firefighters were among the dead, Reuters reported.

"The shock waves were felt kilometers away, with some residents claiming their window glass and fish tanks shattered," said Xinhua, the official news agency.

The Beijing News and other local media in Tianjin said that 300 to 400 people had been hospitalized, many from injuries caused by shattered glass. It also reported that more than 400 Tianjin residents had See **EXPLOSIONS** on A6 ►

Prosecutor: Zumberge a calm killer

chao.xiong@startribune.com

Just minutes after he squeezed off four shotgun cartridges at his New Brighton neighbors last year, spraying the couple with 32 projectiles, Neal Zumberge called 911 to report what he'd done.

He was "calm" during the call because he had plotted the cold-blooded act, Assistant Ramsey County Attorney Anna Christie said Wednesday in her opening statements at Zumberge's murder trial in St. Paul.

"This was something he had been thinking about, planning," Christie told jurors, "... he stood there watching and watching and waiting until the time was right" to shoot.

In coming days, a Ramsey County jury will have to determine whether Christie's See **ZUMBERGE** on A8 ►

Foes rally against proposed hog farm

◀ **SUPERIOR** from Al feedlot moratoriums, thousands have signed petitions, and local Indian tribes have persuaded the U.S. Environmental Protection Agency (EPA) to weigh in on the state's review. And last week, an Ashland City Council member led a "stink-in" with buckets of pig manure that gave a whiff of what could be in store.

The community uprising is all the more notable given Wisconsin's farming history, cuts to environmental protections by the Republican Legislature and the anti-regulatory drumbeat coming from Gov. Scott Walker's presidential campaign.

"This is a real uphill battle for us," said Bill Bussey, a board supervisor in Bayfield County, where the swine operation would be built. "But I think we need to undertake it."

Officials with Reicks View Farms, an Iowa operation that wants to build the 26,000-head hog operation, said they were taken aback by the intensity of local opposition. They said the feedlot will abide by all state clean-water rules, and they even welcomed the state's decision last month to conduct a major environmental impact statement on the proposal, an unusual step for a feedlot.

Reicks View runs several businesses, including 40 swine facilities, in northeast Iowa. It chose northern Wisconsin for a new sow-breeding operation largely to escape the infectious diseases that have devastated the pork industry in recent years.

"We've been looking north for a more isolated area for a long time," said Gene Noem, head of swine operations for Reicks View. "We intend to run an operation that follows all the laws and operates in an environmentally friendly way."

Green Bay pollution

The proposal for the feedlot, to be called Badgerwood, first surfaced in January. Reicks View asked the Wisconsin Department of Natural Resources for a permit for a facility that would house 26,000 swine, mostly piglets, and produce 9 to 10 million gallons of manure a year. The manure would be spread across 1,380 agricultural acres, some owned by the company and some by neighboring farmers.

Large animal operations are

DEB PASTNER • dpastner@startribune.com

Opponents of a proposed large-scale hog facility in the Lake Superior watershed are worried about possible pollution runoff.

nothing new to Wisconsin — the state is home to some 272 Concentrated Animal Feeding Operations (CAFOs) of 1,000 animals or more, mostly dairy and beef, and many more smaller ones.

Nor is agriculture new to the area around Bayfield, Ashland and the shores of Lake Superior. Fruit orchards dot the hills of the mainland above the Apostle Islands. The townships south of Ashland, where the CAFO would be built, depend on cows and crops — the site itself is a former dairy farm. And, as Noem pointed out, the fields they would use to spread manure are already fertilized regularly.

But the number of big feedlots in Wisconsin has been growing steadily since 2000, and they are increasingly controversial — especially near Green Bay. There, runoff from manure and other fertilizers has contributed to a major dead zone in the bay and contaminated some local wells.

An administrative law judge said last year that a "massive regulatory failure" had led to groundwater contamination in the area and ordered the Wisconsin DNR to act, a case that

has convinced many communities around Lake Superior that the state is not going to protect their bay.

Noem said he hopes that those in the community will judge Reicks View on its own record and not on the industry in general.

Local residents also fear their countryside is not suitable for intensive farming.

"I can't imagine a more inappropriate place" for a large livestock operation, said Gordon Stevenson, who ran the Wisconsin DNR's agricultural runoff program before his retirement. He is now an outspoken critic of his former employer and the state's environmental policies.

That area of Lake Superior is also home to two Indian tribes that are aligned with the anti-CAFO group and are increasingly outspoken to the federal government about the cumulative environmental problems throughout the region, said Jim Zorn, executive administrator of the Great Lakes Indian Fish and Wildlife Commission.

"You have to start looking at this on a comprehensive basis," he said.

The area around the Apostle Islands is granted extra federal and state protections because it is considered a largely pristine and outstanding resource, said Bob Krumenaker, superintendent of the Apostle Islands National Lakeshore. That means the state has an extra responsibility to ensure it stays that way, he wrote in a letter to the DNR urging a comprehensive environmental review.

"This park is something that is precious," he said.

Blue turns red

Opponents are mostly worried that pollutants will run into a trout stream and Fish Creek, which empties into Chequamegon Bay close to the intake pipe for Ashland's drinking water. Fish Creek already has excessive levels of phosphorus, a nutrient that causes algal blooms and E. coli, said Randy Lehr, an environmental scientist at Northland College in Ashland.

The big storms expected to become more common with climate change would aggravate the risks. In 2012, Chequamegon Bay and the Apostle Islands experienced their first

algal bloom, following the massive rainstorm that flooded towns from Duluth to Ashland and turned the blue Lake Superior water red with clay.

"That was big news for us," Lehr said.

It's not clear at this point what impact 10 million gallons of manure would have in the watershed, Lehr said. A lot depends on how much of a nutrient load is in the system already and how much makes its way to the lake.

Lehr's research shows that phosphorus levels in the bay are hovering around the maximum allowed by state and federal law, but an EPA study found that in 2008 they were much higher.

Noem and other agriculture experts say that with careful management and soil studies, manure applications can be precisely calibrated to what the crops need in order to prevent runoff and groundwater contamination.

"Manure as a fertilizer is valuable to us," Noem said. "We will figure out ways not to waste it."

Badgerwood would also create jobs and boost the local economy, he said, one reason

Source: ESRI, GLIN
RAY GRUMNEY • Star Tribune

why it's supported by some current and former farmers in the area.

"This is the modern agriculture that we have progressed to," said Clay Burditt, who farms near Ashland. Opposition to it, he said, "is an attack on our way of life."

Local strategy

In fact, the local communities may not have the legal power to stop it. Wisconsin passed a law in 2006 that sets basic standards for CAFOS and neutralized local zoning laws. If an applicant can meet them and provide necessary information in the permit, then the DNR must approve it.

Those opposing the project, led by a group called Farms Not Factories, are now trying to persuade the Bayfield County Board of Supervisors to consider a strategy that local communities have used to control frac sand mines in the state — operational zoning laws. In essence, they would require Badgerwood to prove that it won't pollute the water, spread disease or cause noxious smells, said Glenn Stoddard, an attorney with Farms Not Factories.

Going up against powerful political and agricultural interests in the state will require enormous fortitude from local elected officials, said Mary Dougherty, a Bayfield resident and founder of Farms Not Factories. And that means citizens have to be engaged about taking control of where they live, she said.

"We are, in a crazy way, fortunate that this showed up because we can figure what we want for the community," she said. "The water unites every single person up here."

Powerful blasts rock Chinese port, leaving at least 17 people dead

◀ **EXPLOSIONS** from Al lined up to donate blood at a hospital.

According to the China Earthquake Administration's official account on Weibo, a Web messaging network similar to Twitter, the first explosion took place at 11:34 p.m. and registered as a magnitude 2.3. A second, magnitude-2.9 explosion came 30 seconds later, and it called that one "the equivalent of 21 tons of TNT."

"I thought it was an earthquake, so I rushed downstairs without my shoes on," said Tianjin resident Zhang Siyu, whose home is more than a mile from the blast site. "Only once I was outside did I realize it was an explosion. There was the huge fireball in the sky with thick clouds. Everybody could see it."

Zhang said she could see wounded people weeping. She said she did not see anyone who had been killed, but "I could feel death."

Unanswered questions

The precise nature of the materials that exploded was not made clear, and there was no indication whether the blast was accidental or intentional. There was no official confirmation of what caused the blasts, and no immediate sign of any large release of toxic chemicals into the air.

Beijing News reported on its website that there was some unidentified yellow foam flowing at the site.

Electric power to the blast area was cut and streets were sealed off by the police.

As daylight broke early Thursday, an enormous black plume of smoke hung over the horizon. Residents of a nearby residential area gathered on the street wearing disposable facemasks as injured people, just released from the hospital, hobbled down the street.

The glass on scores of high-rise buildings was shattered and rows of curtains fluttered through the broken windows. Workers swept glass off the street, a wide boulevard surrounded by new high rises.

Police in Tianjin said an initial blast took place at shipping containers in a warehouse for hazardous materials owned by Ruihai Logistics, a company that says it's approved to handle hazardous materials.

State media said that senior management of the company had been detained by authorities and that President Xi Jinping has demanded severe punishment for anyone found responsible for the explosions. The explosions took place in a mostly industrial zone. Buildings of a half-dozen other logistics companies were destroyed in the blasts, and more than 1,000 new Renault cars were left charred in a nearby parking lot, Beijing News reported.

Photos taken by bystanders and circulating on blogs show a gigantic fireball high in the sky, with a mushroom-

cloud. Other photos on state media outlets showed a sea of fire that painted the night sky bright orange, with tall plumes of smoke.

A little more than a mile from the explosion site is the luxury Fifth Avenue apartment complex on a road strewn with pieces of charred metal thrown from explosion. Like surrounding buildings, the Mediterranean-style complex had its windows blown out and some surfaces were scorched.

Apartments a total loss

"It's lucky no one had moved in," said a worker on the site, Liu Junwei, 29. "But for us it's a total loss. Two years hard work down the drain."

"It had been all quiet, then the sky just lit up brighter than day and it looked like a fireworks show," said another worker on the site who gave just his surname, Li.

In one neighborhood about 6 to 12 miles from the blast site, some residents were sleeping on the street wearing gas masks, although there was no perceptible problem with the air apart from massive clouds of smoke seen in the distance.

"It was like what we were told a nuclear bomb would be like," said truck driver Zhao Zhencheng, who spent the night in the cab of his truck. "I've never even thought I'd see such a thing. It was terrifying but also beautiful."

At the nearby Taida Hospital as dawn broke, military

Chinatopix via AP

Tianjin's streets were filled with people who were evacuated from their homes late Wednesday.

medical tents were set up. Photos online showed patients in bandages and with cuts.

State broadcaster CCTV said six battalions of firefighters had brought the fire under control, although it was still burning early Thursday.

Ruihai Logistics said on its website that it was established in 2011 and that it handles 1 million tons of cargo annually.

Tianjin, with a population of about 15 million, is about 75 miles east of Beijing and is one of the country's major ports. It is one of China's more modern cities and is connected to the capital by high-speed rail.
